SUMMARY

Data Engineer with 2 years of experience building and maintaining production ETL pipelines using SQL and Microsoft Azure. Skilled in designing reliable data workflows, optimizing queries, and developing scalable data processing systems for enterprise applications.

EXPERIENCE

Accenture

Jul 2023 – Jul 2025

Associate Software Engineer

Chennai, India

- Designed, developed, and maintained production ETL pipelines using SQL and Microsoft Azure, supporting reliable ingestion and transformation of large-scale enterprise datasets under strict SLA requirements.
- Delivered and supported production-grade data integrations for 10+ enterprise clients, enabling cloud-to-cloud and cloud-to-on-prem data movement across heterogeneous source systems.
- Improved data quality and pipeline reliability by implementing schema validations, data consistency checks, and structured error-handling mechanisms, reducing downstream data issues.
- Collaborated with business analysts and downstream consumers to translate functional requirements into optimized data models, workflows, and analytics-ready schemas.
- Owned monitoring and operational support for production pipelines, performing root-cause analysis on data failures and restoring pipelines within defined SLAs.
- Recognized with the **Sparkling Star Award** for consistent ownership and delivery of stable, high-quality data integrations.

EDUCATION

SNS College of Technology

Coimbatore, India

Bachelor of Engineering in Electronics and Communication Engineering CGPA: 9.04

2019 – 2023

PROJECTS

Azure Financial Data Lakehouse (Medallion Architecture)

[GitHub](#)

Python, PySpark, Azure Data Factory, Databricks, Delta Lake, ADLS Gen2, Structured Streaming, Unity Catalog, Azure SQL, Azure Key Vault

- Architected end-to-end Medallion Lakehouse on ADLS Gen2 processing 51,000+ financial transactions through Bronze → Silver → Gold layers with full data lineage via Databricks Unity Catalog.
- Built metadata-driven ADF orchestrator new data sources added via config CSV with zero code changes; 4 parallel ingestion streams with watermark incremental loads reducing ingestion volume by 80%.
- Implemented SCD Type 2 for customer dimension with SHA-256 change hash detection and PII masking (email regex, phone tokenization, DOB hashing) enforced at Silver layer via Unity Catalog RBAC.
- Applied Delta Lake MERGE upsert with OPTIMIZE + ZORDER for idempotent Silver writes; implemented Delta Live Tables pipeline with @dlt.expect quality rules and automated lineage tracking.
- Built Lambda Architecture streaming pipeline using Auto Loader + Structured Streaming real-time anomaly scoring, exactly-once delivery via checkpointing, and 1-hour tumbling window KPI aggregations.

Cloud-Native Data Engineering Pipeline on AWS (S3 → RDS PostgreSQL)

[GitHub](#)

Python, SQL, AWS S3, RDS, CloudWatch, Git

- Designed and implemented a cloud-native batch data pipeline to ingest semi-structured JSON data from Amazon S3 and load analytics-ready data into PostgreSQL on AWS RDS.
- Developed Python-based ETL workflows using boto3 and pandas to perform data parsing, validation, and transformations prior to ingestion.
- Implemented incremental and idempotent data loads into Amazon RDS using SQL-based inserts, ensuring reliable re-processing without data duplication.
- Integrated Amazon CloudWatch logging to capture ETL execution status, failures, and operational metrics, improving observability and operational troubleshooting.
- Version-controlled pipeline code using Git and GitHub, ensuring reproducibility, clear documentation, and traceable development history.

TECHNICAL SKILLS

Programming & Data: Python, SQL, PySpark, Pandas

Cloud & Big Data: Microsoft Azure (ADF, Azure Data Lake Gen2, Azure Synapse Analytics, Databricks), AWS (S3, RDS, CloudWatch, IAM)

Databases: PostgreSQL, MS SQL, SQLite

Tools & Practices: Git, CI/CD, Data Quality, Pipeline Monitoring, Root Cause Analysis

Soft Skills: Communication, Team Collaboration, Problem Solving, Design Thinking
