EXPERIENCE

Accenture

Jul 2023 – Jul 2025

Associate Software Engineer

Chennai, India

- Engineered and maintained scalable ETL pipelines using SQL and Microsoft Azure, enabling reliable ingestion and transformation of enterprise-scale datasets.
- Delivered production-grade data integrations for **10+ client applications**, supporting cloud-to-cloud and cloud-to-on-prem data movement.
- Developed and optimized complex SQL queries and ETL workflows by applying indexing strategies, query refactoring, and validation logic to improve pipeline performance and reliability.
- Worked with relational databases and procedural SQL logic to support data transformations, schema validations, and analytics-ready data models.
- Collaborated with business analysts and stakeholders to translate functional requirements into optimized data workflows and database schemas.
- Monitored and supported production pipelines, performing root-cause analysis and resolving data failures within defined SLAs.
- Recognized with the **Sparkling Star Award** for consistent ownership and delivery of high-quality data integrations.

Techvolt Software Solutions

Dec 2021 – Jan 2022

Embedded Systems – Industrial Training

Coimbatore, India

- Completed hands-on industrial training focused on embedded systems and hardware–software integration.
- Interfaced microcontroller platforms with sensors for real-time data acquisition and signal processing.
- Developed Embedded C programs for reading sensor inputs, debugging, and device control.

EDUCATION

SNS College of Technology

Tamil Nadu, India

Bachelor of Engineering in Electronics and Communication Engineering

2019 – 2023

PROJECTS

End-to-End Data Engineering Pipeline with Staging & Audit Layer

Python, SQL, Pandas, SQLite, Git

- Built an end-to-end batch ETL pipeline to ingest, transform, and load structured data using Python and SQL.
- Implemented staging and audit layers to support idempotent processing, controlled re-runs, and historical traceability.
- Applied business transformations to generate analytics-ready datasets for downstream consumption.

Cloud-Native Data Engineering Pipeline on AWS (S3 → RDS PostgreSQL)

Python, SQL, AWS S3, AWS RDS (PostgreSQL), CloudWatch, Git

- Designed and implemented a cloud-native ETL pipeline to ingest semi-structured JSON data from Amazon S3 and load it into PostgreSQL on AWS RDS.
- Developed Python-based ETL workflows using **boto3** and **pandas** for data parsing, validation, and transformations.
- Implemented incremental and idempotent data loads using SQL-based inserts to ensure reliable reprocessing without duplication.
- Integrated CloudWatch logging for monitoring execution status, failures, and operational metrics.

TECHNICAL SKILLS

Programming & Data: Python, SQL, PL/SQL (procedures, functions, cursors – learning), Pandas

Databases: Oracle (SQL/PLSQL – foundational), PostgreSQL

Data Engineering: ETL Pipelines, Data Warehousing Concepts, Data Modeling, Query Optimization

Big Data: Apache Spark (PySpark fundamentals), Hadoop (concepts)

Cloud & Tools: AWS (S3, RDS, CloudWatch), Microsoft Azure, Git

Soft Skills: Communication, Team Collaboration, Problem Solving
